                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                complete sequence against a peptide database and plant EST databases at TIGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats were identified by repeatmasker (Arian Smit, 'ftp.genome.washington.edu/RW/RepeatMasker.html). Genes are numbered from the top to the bottom of the chromosome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lin,X., Kaul,S., Rounsley,S.D., Shea,T.P., Benito,M.-I., Town,C.D., Fujii,C.Y., Mason,T.M., Bowman,C.L., Barnstead,M.E., Feldblyum,T.V., Buell,C.R., Ketchum,K.A., Lee,J.J., Ronning,C.M., Koo,H., Moffat,K.S., Cronin,L.A., Shen,M., VanAken,S.E., Umayam,L., Tallon,L.J., Gill,J.E., Adams,M.D., Carrera,A.J., Creasy,T.H., Goodman,H.M., Somerville,C.R., Copenhaver,G.P., Preuss,D., Mierman,W.C., White,O., Elsen,J.A., Salzberg,S.L., Fraser,C.M. and

The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant breeding programs. Controllable and reproducible apomixis provides many advantages in plant improvement and cultivar development in the case that sexual plant improvement and cultivar development in the case that sexual plants are available as crosses with the apomictic plant. Apomixis provides for true-breeding, seed propagated hybrids and could shorten and simplify the breeding process so that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated. Apomixis allows plant breeders to develop cultivars with specific stable traits for such characteristics as height, seed and forage quality and maturity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Production of apomictic seeds - useful in plant breeding Production of apomictic seeds - useful in plant breeding Claim 27; Pages 91-95; 123pp; English.

It may be used as part of a method of producing apomictic seeds comprising: (a) transforming plant material with a nucleotide sequence encoding a protein which in active form in a cell or cell membrane renders the cell embryogenic; (b) regenerating the transformed material into plants or carpel-containing plant parts; and (c) expressing the sequence in the vicinity of the transformed material into plants or carpel-containing plant parts; and (c) expressing the sequence in the vicinity of the embryo sac. The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant breeding programs. Controllable and reproducible apomixis provides many advantages in plant improvement and cultivar development in the case that sexual plants are available as crosses with the apomictic plant. Apomixis provides for true-breeding, seed apomictic plant selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated.

Apomixis allows plant breeders to develop cultivars with seed and forzage quality and maturity.

plant parts; and (c) expressing the sequence in the vicinity
of the embryo sac. The apomictic seeds and embryos thus produced
can be developed into plant progeny. This is useful in plant
breeding programs. Controllable and reproducible apomixis provides
many advantages in plant improvement and cultivar development in
the case that sexual plants are available as crosses with the
propagated hybrids and could shorten and simplify the breeding
propagated hybrids and could shorten and simplify the breeding
process so that selfing and progeny testing to produce and/or
stabilise a desirable gene combination could be eliminated.
Apomixis allows plant breeders to develop cultivars with
specific stable traits for such characteristics as height,
seed and forage quality and maturity.

The sequence is that encoding SERK, a putative receptor kinase. It may be used as part of a method of producing apomictic seeds comprising: (a) transforming plant material with a nucleotide sequence encoding a protein which in active form in a cell or cell membrane renders the cell embryogenic; (b) regenerating

Production of apomictic seeds - useful in plant breeding
Production of apomictic seeds
CC CIAim 21; Pages 47-51; 123pp; English.
CC It may be used as part of a method of producing apomictic seeds
CC comprising: (a) transforming plant material with a nucleotide
CC comprising: (a) transforming plant material with a nucleotide
CC cell membrane renders the cell embryogenic; (b) regenerating
CC the transformed material into plants or carpel-containing
CC plant parts; and (c) expressing the sequence in the vicinity
CC of the embryo sac. The apomictic seeds and embryos thus produced
CC can be developed into plant progeny. This is useful in plant
CC treeding programs. Controllable and reproducible apomixis provides
CC many advantages in plant improvement and cultivar development in
CC the case that sexual plants are available as crosses with the
CC apomictic plant. Apomixis provides for true-breeding, seed
CC process so that selfing and progeny testing to produce and/or
CC stabilise a desirable gene combination could be eliminated.
CA pomixis allows plant breeders to develop cultivars with
CC specific stable traits for such characteristics as height,
CC seed and forage quality and maturity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     닭
                                       DNA encoding plant morphogenesis regulatory protein - useful to yield plants with short stems or altered inflorescence Claim 1; Pages 6-10; 17pp; Japanese.

The present sequence encodes an Arabidopsis thaliana plant morphogenesis regulatory protein (MRP), which can be used to yie a plant with, e.g. short stems or altered inflorescence. The MRF acts on a plant at a specific site for a specific period, and car therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform a plant to increase its MRP expression, and therefore control the form (particularly stem length) of the plant.

The MRF acts on a plant at a specific site for a specific period, and can therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform a plant to increase its MRP expression, and therefore control the form (particularly stem length) of the plant.

New receptor kinase Binl involved in brassinolide signalling - useful for promoting increased yield and disease resistance in plants and for modulating occyte maturation. Claim 8; Page 49-52; 72pp; English. This DNA sequence codes for a novel plant steroid receptor kinase, designated Binl (see W97819), which is involved in the pathway for the synthesis of the plant steroid hormone, brassinolide. 18 New
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Arabidopsis steroid receptor Binl DNA. BIN1; steroid receptor; receptor kinase; transgenic brassinosteroid; disease resistance; crop protection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   6820

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Arabidopsis dwarf mutants were identified that lacked the ability to respond to brassinolide, and were named bin mutants. The bini mutantons were used to map the gene to a small interval on Arabidopsis chromosome 4. Bini was cloned by map-based cloning. The Bini polynucleotide was identified within this interval by sequencing the wild-type and mutant alleles of this nucleic acid. Overexpression of Bini in transgenic plants provides plants characterised as having enhanced disease resistance, increased plant yield or vegetative biomass and increased seed yield. Expression of Bini may also increase resistance to pesticides. Inhibition of Bini, e.g. using antisense oligonucleotides (AON), is used to render plants male-sterile, and to reduce their stature or yield, e.g. for creating dwarf varieties. Since Bini homologues may be involved in regulation of the menstrual cycle and uterine function, Bini, antibodies and AON may be useful as contraceptives, for improving success of in vitro fertilisation and to prevent premature labour. Transgenic animals are also provided, and are

New apoptosis-resistant virus-sensitive cell

Example 1; Page 38-41; 51pp; English.

The present invention describes an apoptosis-resistant virus-sensitive cell line into which an apoptosis resistance gene has been introduced.

The present invention describes an apoptosis-resistance gene has been introduced.

The recombinant viruses generated are capable of expressing apoptosis-associated genes. These can then be used in a variety of diseases for which the induction of apoptosis by gene transfer, or where the induction of harmful apoptosis, is therapeutic. The recombinant viruses are useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selectively, the treatment of autoimmune diseases and graft rejection reaction, and apoptosis induction therapy for inflammatory cells in inflammatory diseases. Prior arts have encountered the problem where if an ademovirus vector capable of the reguired to induce cell death by apoptosis is shorter than that cells, required to replicate and produce the virus, resulting in failure to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Ma

Such genes from cassava, maize and tomato are also described. The genes and proteins cabe used for enhancing resistance to Xanthomonas in a plant, preferably rice or tomato.

In this invention an apoptosis resistant 293 cell line (having apoptosis resistant gene introduced) is established and overcomes the problem. The present sequence represents the base sequence of the plasmid pRx-ires-bsr, which contains the cowpox virus bsr gene, and is used in an example from the present invention.

Sequence 6644 BP; 2166 A; 1573 C; 1424 G; 1481 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1209

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 2; Page 41-45; Sipp; English:

Combined the present invention describes an apoptosis-resistant virus-sensitive cell line into which an apoptosis resistance gene has been introduced. Combined the induction of apoptosis are capable of expressing apoptosis-sassociated genes. These can then be used in a variety of diseases for which the induction of apoptosis by gene transfer, or where the combinant viruses generated are capable of expressing apoptosis-sare useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selectively, the treatment of cutolimune diseases and graft rejection reaction, and apoptosis induction therapy for inflammatory cells in inflammatory diseases. Prior arts have concountered the problem where if an adenovirus vector capable of expressing an apoptosis-associated gene is introduced into animal cells, the cells producing the virus will be destroyed because the period of contain a recombinant virus having the integrated apoptosis-associated gene. In this invention an apoptosis-resistant 293 cell line (having an apoptosis resistant gene introduced) is established and overcomes the problem. The present sequence represents the base sequence of the cuts used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 1; Page 34-38; 51pp; English.

Example 1; Page 34-38; 51pp; English.

CC cell line into which an apoptosis resistant virus-sensitive cell line into which an apoptosis resistance gene has been introduced. The recombinant viruses generated are capable of expressing apoptosis. The recombinant viruses generated are capable of expressing apoptosis. CC associated genes. These can then be used in a variety of diseases for which the induction of apoptosis by gene transfer, or where the combinant viruses generated are useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selectively, the treatment of autoimmune diseases and graft rejection reaction, and apoptosis induction through for inflammatory cells in inflammatory diseases. Prior arts have encountered the problem where if an adenovirus vector capable of cexpressing an apoptosis-associated gene is introduced into animal cells, the cells producing the virus will be destroyed because the period of time required to induce cell death by apoptosis is shorter than that required to replicate and produce the virus, resulting in failure to obtain a recombinant virus having the integrated apoptosis resistant dead gene. In this invention an apoptosis-resistant 293 cell line (having an apoptosis resistant gene introduced) is established and overcomes the prosent sequence represent invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                           cell line into which an apoptosis resistance gene has been introduced.

Comparison of the recombinant viruses generated are capable of expressing apoptosis-
compared to the induction of apoptosis by gene transfer, or where the
comparison of harmful apoptosis by gene transfer, or where the
comparison of harmful apoptosis by gene transfer, or where the
comparison of harmful apoptosis by gene transfer, or where the
comparison of harmful apoptosis by gene transfer, or where the
comparison of harmful apoptosis by gene transfer, or where the
comparison of the virus for gene therapy which can be applied to cancer
comparison of the virus and graft rejection reaction, and apoptosis induction
comparison of the virus where if an adenovirus vector capable of
comparison of the virus will be destroyed because the period of
comparison of the virus will be destroyed because the period of
comparison of the virus will be destroyed because the period of
comparison of the virus having the integrated apoptosis-associated
comparison of the virus having the integrated apoptosis-associated
comparison of the virus having the integrated apoptosis-associated
comparison of the virus having the integrated apoptosis-associated
comparison of the present sequence represents the base sequence of the
comparison of the present sequence represents the base sequence of the
comparison of the present sequence represents the base sequence of the
comparison of the present thrention.

New RRK polynucleotides and nucleic acid constructs - generating transgenic plants resistant to Xanthomonas Claim 14; Page 61-62; 67pp; English.

This invention describes a method for conferring diserning invention describes the use of novel generation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1209

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5643
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1149
This invention describes a method for conferring disease resistance in plants. The invention describes the use of novel genes and proteins belonging to the Oryza longistaminata and Oryza sativa receptor kinase-like protein (RRK) Xa2l multigene family. Such genes from cassava, maize and tomato are also described. The genes and proteins can be used for enhancing resistance to Xanthomonas in a plant, preferably in

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Score
